SPPARKS is an efficient *parallel* Kinetic Monte Carlo framework

- ▷ Mesoscale materials phenomena as stochastic processes
- ▷ Scalable to thousands of processors
- ▷ Modular C++ facilitates user-defined models/statistics
- ▷ Open Source (GPLv2)
- ▷ Related to the LAMMPS Molecular Dynamics framework

SPPARKS is a command-line application. Simulations are defined by input scripts composed of **SPPARKS commands**

The most important commands are:

- ▷ `app_style`
- ▷ `solve_style` / `sweep_style`
- ▷ `diag_style`

# What applications is SPPARKS useful for?

Running  
SPPARKS in  
parallel

- ▷ lattice-based models
- ▷ off-lattice models
- ▷ generic KMC applications

In this session, we'll focus on the Potts model

- ▷ Modeling grain growth, recrystallization, and related phenomena
- ▷ Annealing synthetic microstructures to achieve local equilibrium along triple lines
- ▷ Generation of simple synthetic microstructures

Running  
SPPARKS in  
parallel

SPPARKS is distributed with several makefiles, found in `src/MAKE/`.

```
bdecost@unix6 > ls MAKE ~/Software/spparks-19Nov13/src
Makefile.blackrose  Makefile.mac      Makefile.serial
Makefile.cygwin     Makefile.mac_debug Makefile.serial_backup
Makefile.g++        Makefile.mac_mpi  Makefile.serial_debug
Makefile.linux      Makefile.redsky   Makefile.xt5
```

You will likely have to edit `Makefile.linux`, `Makefile.g++`, or `Makefile.mac_mpi` to reflect your system to get SPPARKS to compile.<sup>2</sup>

---

<sup>2</sup>You'll likely need to supply the location of the MPI library files on your system.

# Building SPPARKS

## SPPARKS

Introduction  
to SPPARKS

Getting  
started with  
SPPARKS

Demo:  
SPPARKS  
input scripts

Demo: Grain  
growth  
kinetics

Demo:  
Visualization  
with  
ParaView

Running  
SPPARKS in  
parallel

Try to compile SPPARKS by running make with the appropriate build target for your system as an argument.<sup>3</sup>

### Building SPPARKS using Makefile.demo

```
make demo
```

The result is an executable named `spk_demo` in `src/`.

---

<sup>3</sup>To use the demo makefiles, first copy `Makefile.demo` and `Makefile.demo_serial` are in the SPPARKS `src/MAKE` directory.

# Building serial SPPARKS

## SPPARKS

Introduction  
to SPPARKS

Getting  
started with  
SPPARKS

Demo:  
SPPARKS  
input scripts

Demo: Grain  
growth  
kinetics

Demo:  
Visualization  
with  
ParaView

Running  
SPPARKS in  
parallel

SPPARKS comes with a placeholder MPI library for building a serial version.

First build the MPI stubs:

```
cd STUBS  
make  
cd ..
```

Build the demo\_serial version of SPPARKS

```
make demo_serial
```

# “Installing” SPPARKS<sup>4</sup>

## SPPARKS

Introduction  
to SPPARKS

Getting  
started with  
SPPARKS

Demo:  
SPPARKS  
input scripts

Demo: Grain  
growth  
kinetics

Demo:  
Visualization  
with  
ParaView

Running  
SPPARKS in  
parallel

To avoid copying the SPPARKS executable or typing the full path to it repeatedly, define a *shell alias*:

```
alias spk=~ /Software/spparks/src/spk_demo_serial
```

Now typing `spk` into the shell prompt from any working directory runs SPPARKS. Try this now.

---

<sup>4</sup>To make this persistent, append this command to `~/.bashrc` (`~/.bash_profile` on a mac)

# Running SPPARKS with no input

SPPARKS in  
parallel

SPPARKS is controlled by a script of commands which are executed line-by-line.

### Run the basic demo

```
cd ~/Downloads/spparks-demo-master/demos/basic  
spk < basic.spkin
```

SPPARKS will print some diagnostic information to the screen, and to a log file called `log.spparks`.

# SPPARKS output

This demo includes a python script which extracts grain growth kinetics from `log.spparks` and attempts to plot them.

Run the python script

```
python parse_log.py log.spparks
```

The script produces a file `cluster-stats.csv` that you can open in Excel.
